

I PAY — Introduction

I PAY connects supported wallets with eligible payment and receiving orders. Link a wallet, review an order, complete the required transaction and submit the requested proof. Successfully completed eligible orders may earn the applicable commission or activity reward.

◆ 01 CONNECT

Link an eligible wallet and keep it active.

◆ 02 COMPLETE

Check the wallet, recipient, exact amount and expiry before completing an order.

◆ 03 SUBMIT & TRACK

Provide the matching UTR and payment screenshot when requested, then review the status.

◆ 04 CHECK ELIGIBILITY

Review the offer conditions and the **300.00** performance quota before requesting reward withdrawals.

The supplied splash screen introduces the brand and its message of convenience and value. It does not show registration or login steps. This guide is for new and existing users.

I PAY AT A GLANCE

Key points to know before you start

✓ Supported wallets

PhonePe, Paytm, MobiKwik and Freecharge are listed for both placing and receiving/selling orders. Business Wallet availability depends on the eligible options for your account; the definitive list is **[Confirmation required]**.

◆ Commission and activity rewards

The supplied current rate is **4%** on successfully completed eligible orders. An extra **₹5** applies to selected eligible activity orders. **Confirm** the live offer and its conditions; the older order screenshot shows 3%.

+ Referral offer

The supplied offer gives **₹100** to the inviter and **₹50** to the invited friend after registration through the link/code and completion of **10 qualifying orders** the **same day**. Incomplete referrals expire without rewards. Current availability is **[Confirmation required]**.

→ Performance quota: 300.00

The supplied rule requires payment tasks totaling **300.00** before reward funds can be withdrawn. The unit, qualifying tasks and calculation method are **[Confirmation required]**. This is not a separate unlocking-fee instruction.

✓ Payment accuracy

Match the bound wallet, order amount and recipient. Complete payment **before expiry**, retain the receipt and submit proof for that same transaction. The supplied notice prohibits Pocket UPI for these orders.

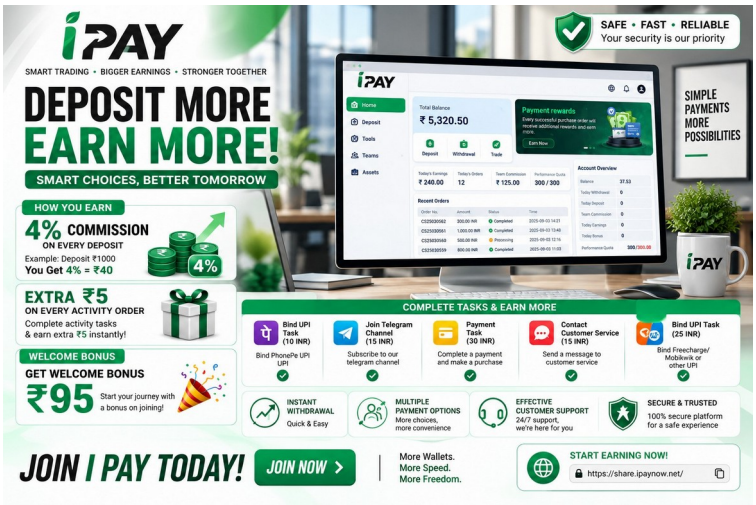

◆ Pending payments and withdrawals

Check the linked account's receiving limit, UPI status and ability to receive funds. If status remains unclear, request a status check before another payment, duplicate withdrawal or wallet change.

Welcome Bonuses and Referral Rewards

◆ Commission and welcome tasks

The supplied current rate is **4%** on successfully completed eligible orders: **₹40** on **₹1,000**. An extra **₹5** applies only to selected eligible activity orders. The older order screenshot shows 3%; confirm the live offer and full conditions.

The five welcome tasks total **₹95**: bind PhonePe UPI **₹10**; join Telegram **₹15**; complete a payment task **₹30**; contact customer service **₹15**; bind another listed UPI **₹25**. Availability, eligibility, verification and claim timing are [Confirmation required].

◆ Referral: ₹100 inviter + ₹50 invited friend

Share the invitation link or code. The friend must register through it and complete 10 qualifying orders the same day, within the one-day validity. Incomplete referrals expire without rewards. Current availability, qualifying-order definitions and exact expiry calculation are [Confirmation required]. No automatic credit time is established.

Promotional claims of instant withdrawal, 24/7 support and 100% security are unverified. Reward withdrawals are subject to the quota condition on page 9.

Supported Wallets and Readiness

◆ Placing and receiving orders

PhonePe, Paytm, MobiKwik and Freecharge are listed for both placing and receiving/selling orders. Placing refers to eligible purchase/payment orders; receiving/selling refers to the receiving side.

◆ Keep your wallet ready

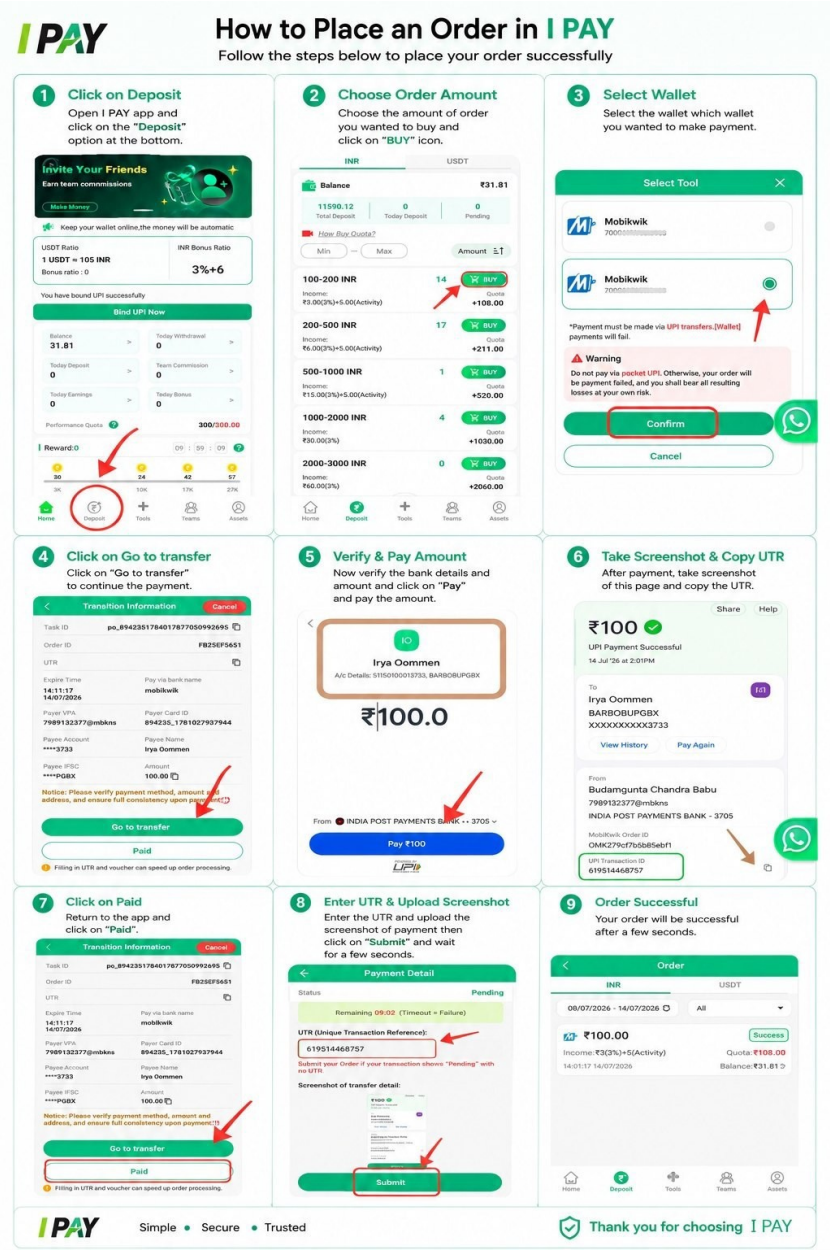

Connect supported wallets, keep them active and confirm the linked account can receive funds. Use the options eligible for your account and order direction. The references do not demonstrate wallet-binding or receiving-order procedures.

◆ Business Wallet eligibility

One reference lists PhonePe Business, Paytm Business and MobiKwik Business; another names Google Pay Business, Paytm Business and BharatPe Business. The definitive eligible list is [Confirmation required]. Illustrated phone controls do not establish a live navigation workflow.

Timing depends on account limits, provider checks and platform processing. Faster withdrawal is not a verified guarantee. See page 8 for status checks.

Placing an order: full reference

Read left to right, then top to bottom: Deposit → BUY → Confirm → Go to transfer → pay → retain receipt/UTR → Paid → upload proof → check status. See the next page for expanded explanations. The pictured 3% rate is an older example.

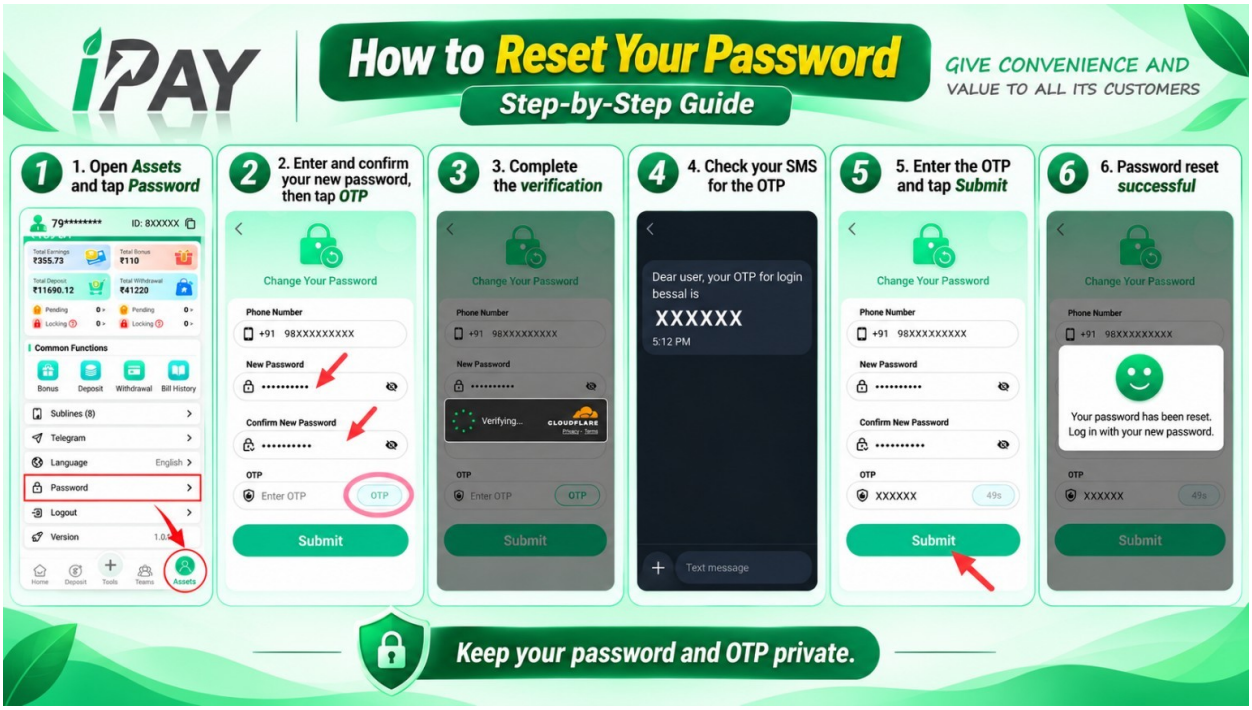

Placing an order: explained

Use the complete nine-panel reference on page 5 alongside these steps.

1. **Open Deposit** Tap Deposit in the bottom navigation.
2. **Choose the order** Review the amount range, terms and applicable rate, then tap BUY.
3. **Confirm the wallet** In Select Tool, select the wallet matching your linked account and tap Confirm.
4. **Open the transfer** Verify the recipient, exact amount and expiry time, then tap Go to transfer.
5. **Complete the payment** Check the provider screen against the order before authorizing the payment.
6. **Retain the proof** Keep the successful payment screenshot and copy its UTR or transaction reference.
7. **Return to the order** After payment is confirmed, return to I PAY and tap Paid.
8. **Submit the proof** Enter the matching UTR, upload that payment screenshot and tap Submit.
9. **Check the status** Review the order record. Success is the example shown; completion time is not confirmed.

If payment status is uncertain or the order has expired, request a status check before paying again. The supplied notice requires matching amounts and payment before expiry.

Password reset: complete sequence

+ Read the six panels from left to right

Open Assets and tap Password. Enter and confirm the new password, then tap OTP. Complete the verification prompt and check the SMS sent to the registered number. Enter that OTP in the app and tap **Submit**. The last panel shows a successful reset and an instruction to log in with the new password.

→ What the reference does not establish

This is a signed-in password workflow. It does not show the separate Forgot password route, account recovery requirements, password complexity rules or OTP limits. These details are **[Confirmation required]**.

Use only the OTP received for your own password request and keep it private. The full six-panel image above preserves the complete supplied sequence.

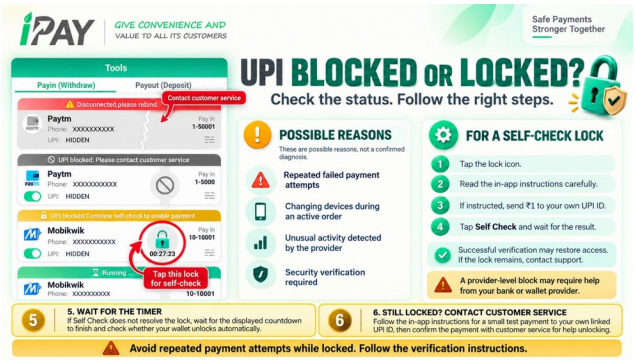

Slow Withdrawals and UPI Locks

◆ Delayed withdrawal: check before changing anything

Check the receiving limit, whether UPI is enabled, whether the account can receive funds, Business Wallet eligibility and the wallet connection. Retain order/payment records and ask I PAY to check the pending withdrawal. These checks do not prove the cause of a delay.

The poster suggests rebinding and retrying; those actions are unverified for a pending order. Avoid duplicate payments or withdrawals. Claims that funds are safe or processing will resume after an issue is resolved are not verified guarantees.

◆ Identify the actual wallet state

Distinguish Disconnected, a customer-service block, a self-check lock and Running. Repeated payment failures, device changes, unusual activity and security checks are possible causes, not diagnoses. Read the instructions for the state shown.

◆ Self-check and precautions

Tap the lock and read the in-app instructions. The updated image says to send ₹1 to your own UPI only if instructed, then tap Self Check. If the lock remains, wait for the displayed countdown to finish and check whether it unlocks automatically. If still locked, contact customer service; follow account-specific in-app instructions for any small test payment to your own linked UPI and confirm it with customer service. The test amount and live conditions are [Confirmation required].

Avoid repeated attempts while locked. A provider-level block may require help from your bank or wallet provider. Verification and timer expiry do not guarantee an unlock or completion time.

Understanding the 300.00 quota

✓ What the number means in this guide

The supplied platform condition states: all reward funds can be withdrawn only after completing payment tasks totaling **300.00**. The order-reference image also shows Performance Quota 300/**300.00** on Home.

◆ Read the display in context

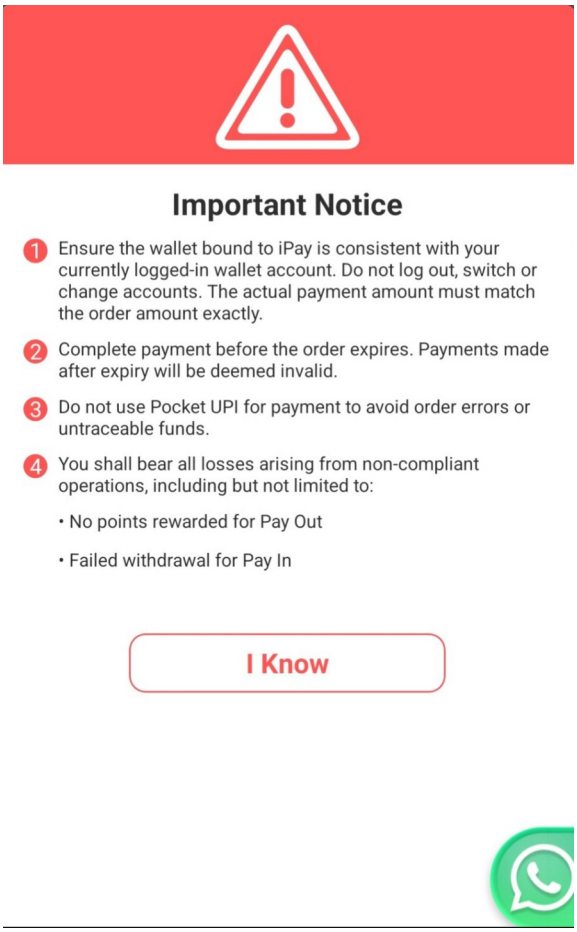

The numbers in these images are examples from the supplied material, not a live account check. The unit, eligible tasks, calculation method and any other withdrawal conditions are **[Confirmation required]**. A quota value alone does not confirm that a particular withdrawal has settled.

+ Rewards and eligibility

The supplied platform details state **4%** commission on successfully completed eligible orders and **₹5** on selected eligible activity orders. The older order image shows 3%. **Confirm** the applicable live offer and its conditions before proceeding.

The quota is not presented here as a separate payment or unlocking fee. No additional payment destination or fee instruction has been supplied.

Important notice: payment rules

⚠ IMPORTANT — CHECK BEFORE YOU PAY

✓ **MATCH YOUR WALLET** Use the signed-in wallet that matches the wallet bound to I PAY.

! CHECK AMOUNT & EXPIRY Pay the exact order amount before the order expires.

× NO POCKET UPI The supplied notice prohibits Pocket UPI for these orders.

⚠ UNCERTAIN STATUS? Request a status check before paying again or submitting a duplicate withdrawal.

Non-compliant operations can cause reward or withdrawal failures. Read the full notice before tapping I Know.
